

OPENCV ON GPU

COMPUTER VISION & GPU

- Apps: robotics, autonomous vehicles, video surveillance...
- Real-time image processing is an ideal task for a GPU
- Massive parallel calculations are common for CV algorithms

OpenCV GPU MODULE

- An infrastructure for CV developers, ready to use (`opencv/gpu`)!
- GPU memory control, stereo vision, mean shift, remap (done)
- NPP integration, support for key OpenCV algorithms (in progress)

GPU STEREO VISION

BLOCK MATCHING

- Real-time FullHD stereo vision
- GPU gives up to **10x** speedup!
- Multi GPU + CPU capability
- Texture-based filtering
- Speckle filtering (CPU)

BELIEF PROPAGATION

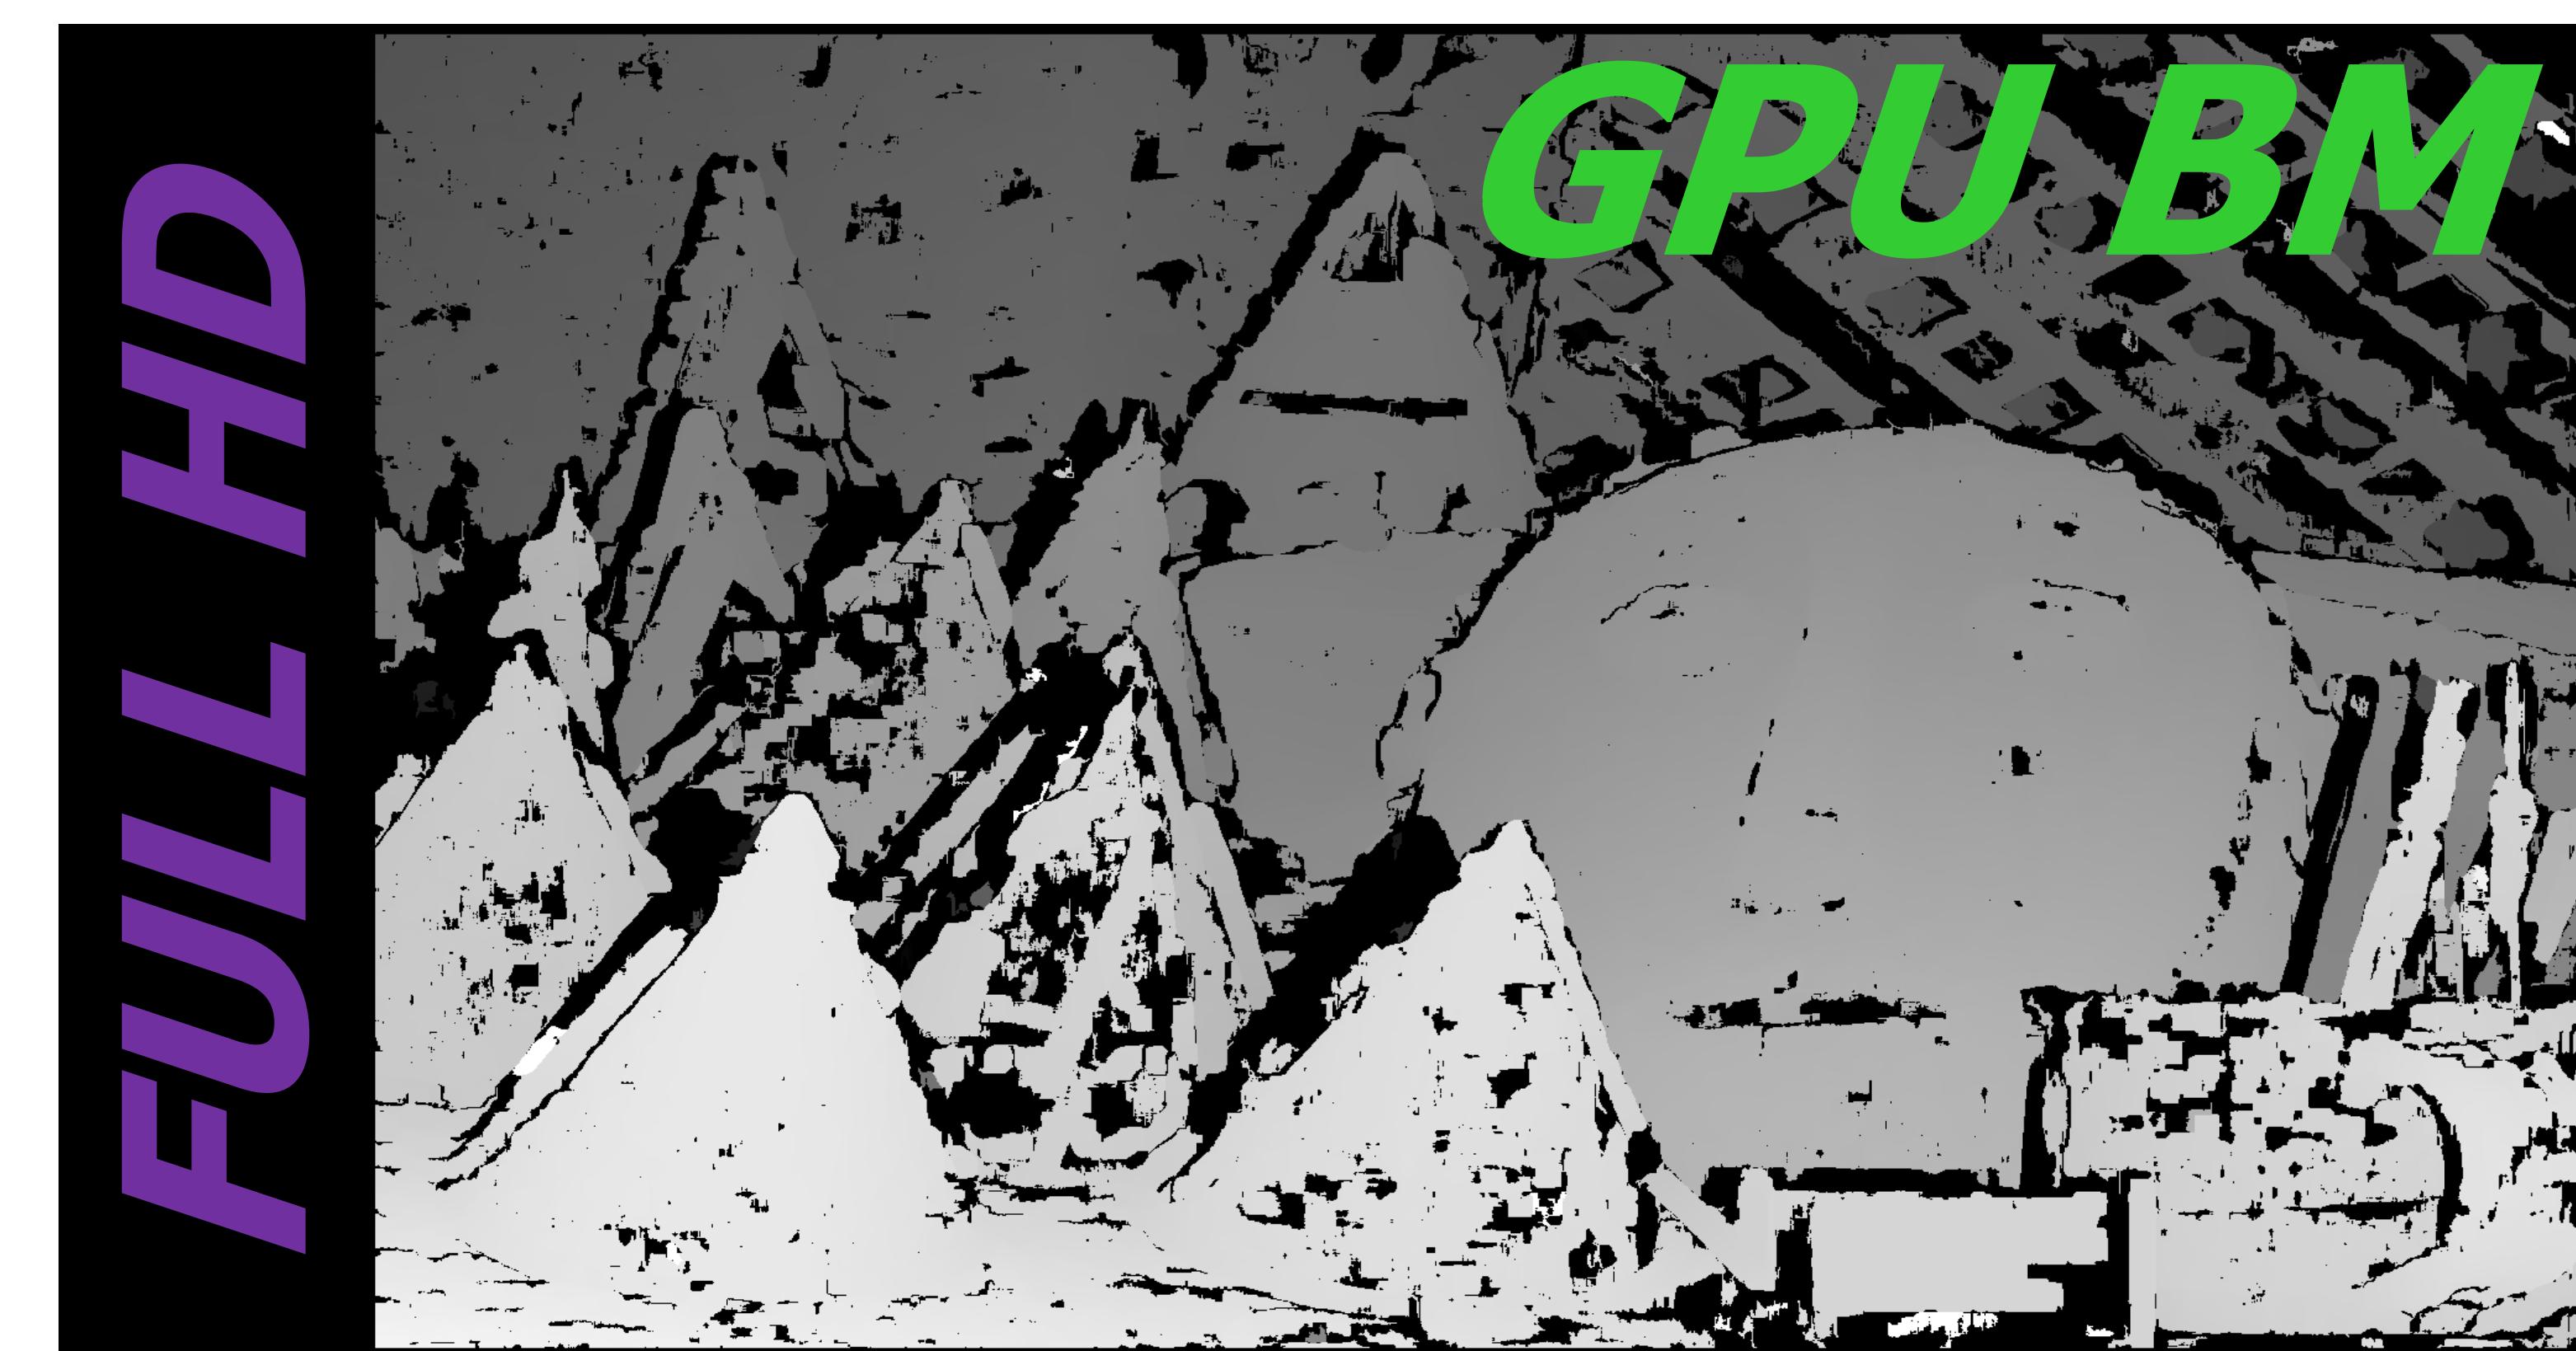

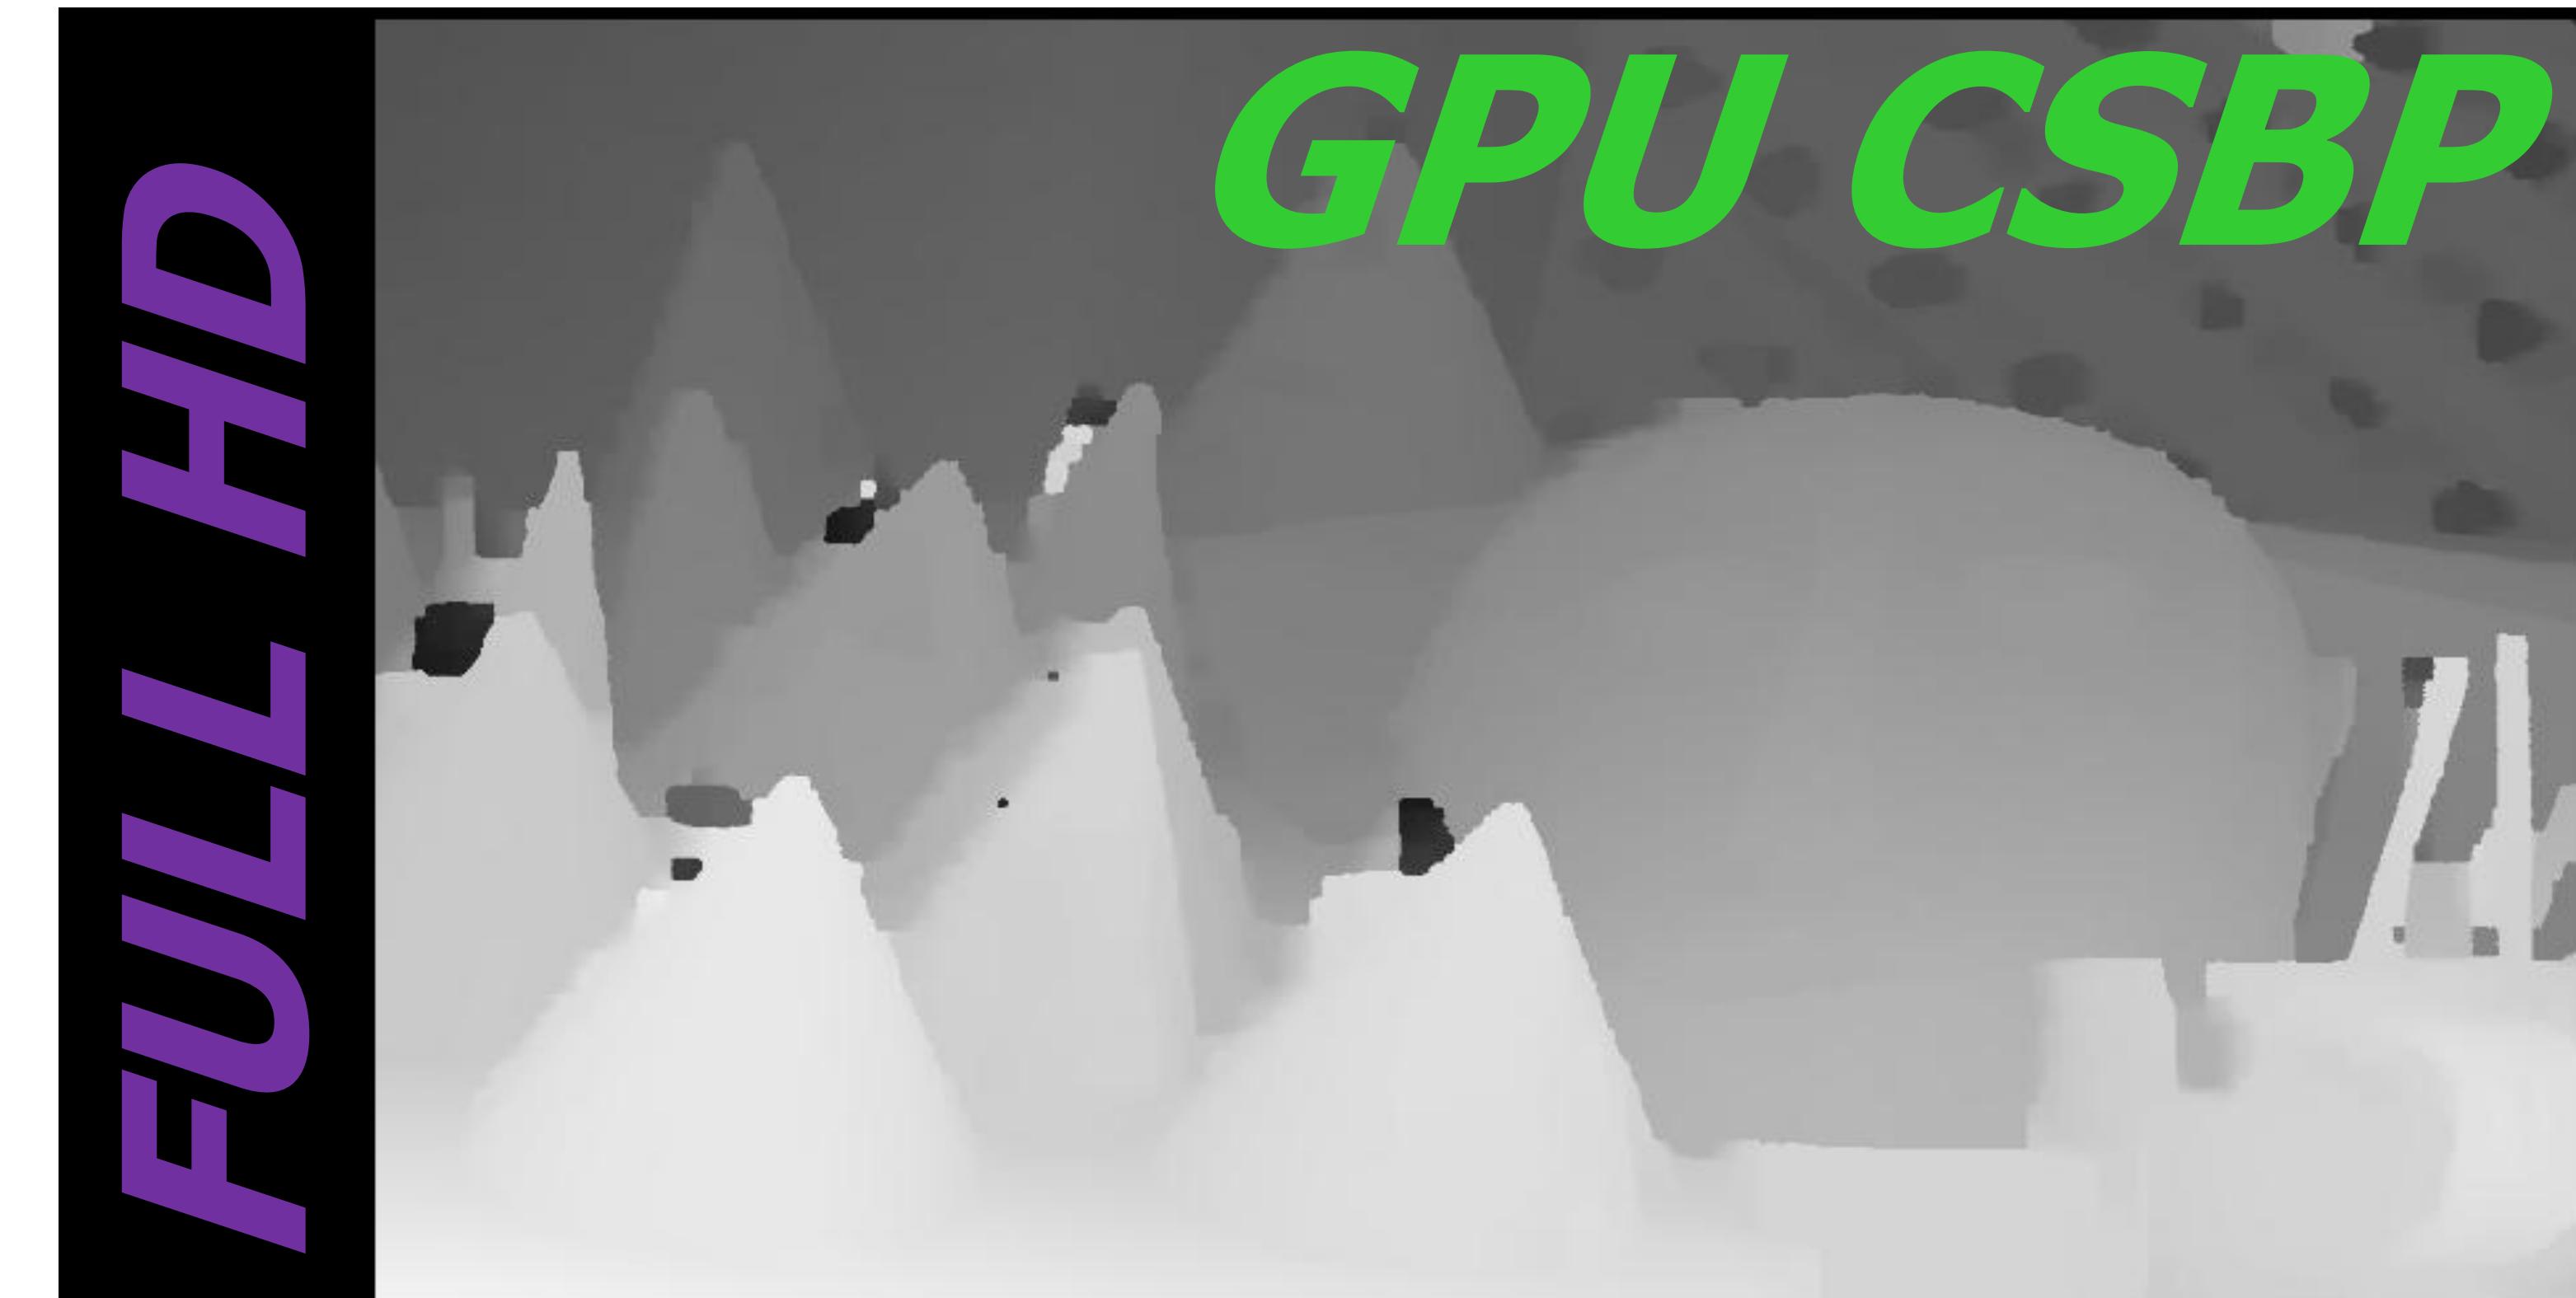

- High-quality stereo correspondence
- GPU gives up to **20x** speedup!
- Hierarchical dense stereo algorithm [1]
- High memory requirements, can run not more than 1280x768 on Tesla 3GB

CONSTANT SPACE BELIEF PROPAGATION

- GPU gives **50-100x** speedup compared with CPU implementation!
- More than 20 times faster than BP GPU
- Hierarchical dense stereo based on BP [2]
- Memory requirements are 500Mb for FullHD, Max Disparity = 256
