

ICERA CONTINUES TO GROW MOBILE BROADBAND REVENUES IN Q3 2009

Fifth Successive Quarter of Growth for Private Semiconductor Company

Bristol, UK 13 October 2009: Icera Inc., the Mobile Broadband semiconductor company, today announced it has generated a fifth successive quarter of strong revenue growth during the third quarter of 2009. Icera's chipsets are used in high performance, high speed Mobile Broadband devices such as USB modem sticks and embedded MiniCard modules for notebook and netbook computers.

Stan Boland, President & CEO of Icera Inc., said: 'Mobile Network Operators are specifying our chipsets for Mobile Broadband devices because we are breaking the rules – aggressively pushing up user data rates whilst simultaneously pushing down costs. This is made possible by our advanced soft modem technology which is delivering increased performance on smaller silicon and therefore more cost effective. Several customers launched Icera-powered devices at 10.2Mbps during the quarter and we expect the first 14Mbps European launches in Q4, which we see as a critical node for 2010. Beyond this, we will sample our first 21Mbps HSPA+ modem software in the next few weeks, also supporting Release 7 features, which further improve network efficiency and user experience, with deployment expected in the first half of 2010.'

Icera's technology is now shipping on at least ten major networks across Europe, US, Latin America and Asia. During the next two quarters, not only does Icera expect to generate further demand for existing products, but the availability of Icera-based products is set to treble, most of which have already been pre-selected by European or US mobile network operators. Icera is owned by Europe's largest technology venture investors and by employees.

About Icera

Icera is a fabless semiconductor company, pioneering high performance, low power, soft modem chipsets for the fast growing mobile broadband device market. Icera technology delivers the highest performance modem solutions for USB dongles, datacards, laptops, mobile internet devices and smartphones. Founded in 2002, Icera is headquartered in the UK, with design locations in the UK,

France and the USA, and customer engineering and sales offices in Asia, Europe and the USA. For more information, visit the Icera web site at www.icerasemi.com.
