HARDWARE INSTALLATION

Installing the NVIDIA® TITAN X graphics card hardware involves opening up your computer. Follow all of the safety instructions provided here to ensure that there is no damage to you, your computer, or the graphics board.

Safety Instructions

To reduce the risk of fire, electric shock, or injury, always follow basic safety precautions.

Note: All hardware must be installed prior to installation of the drivers.

- > Remove power from your computer by disconnecting the AC main source before installation.
- > Do not operate this product near water or when your hands or body are wet.
- > Do not place this product on soft surfaces that could block the ventilation slots and cause overheating.
- > Do not place this product near a heating register or radiator.
- > Place this product securely on a stable surface. Serious damage to this product may result if it falls.
- > Do not allow anything to rest on the power cord. Do not place this product where a person can step or trip on the power cord.

Before You Begin

The NVIDIA® TITAN X graphics card is a PCI Express 3.0 ×16 graphics card. Your computer may already have a graphics card installed in the PCI Express slot. If so, you will need to remove that graphics card and replace it with the TITAN X graphics card.

If you do not have a graphics card, this means that your motherboard has on-board graphics (there is a graphics chip installed on your motherboard or integrated in the motherboard chipset). If this is the case, there is no action that needs to be taken before installing your new graphics card.

Installing the GeForce Graphics Card

Because there are so many different computer systems on the market, the procedure to install the TITAN X graphics card can vary from system to system. Use the following instructions as a guideline and consult the documentation for your computer system for any further information on your individual system.

Note: It is important that all power to the computer be disconnected before you install the graphics card.

Discharge your body's static electricity by touching a grounded surface before touching the graphics card. A grounded surface is the computer chassis, or some other surface you know to be grounded.

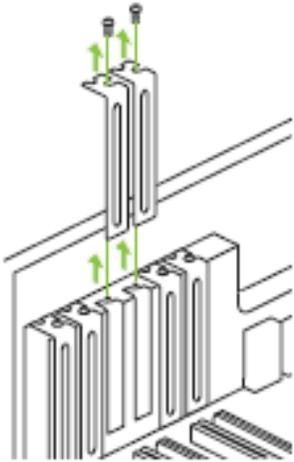

Use the following procedure to install the TITAN X graphics card into your computer system.

- 1 Turn off your computer and monitor and disconnect the power cord.
Depending on your computer system, you may need to disconnect the cable going to the back of your system. Mark the cables so you can make sure you reconnect them properly.
- 2 Open your computer by removing the cover/side panel. Refer to your computer documentation from the original manufacturer for assistance.
- 3 Remove any existing graphics card (if there is one). Save hardware (such as screws and brackets) to use when installing the NVIDIA graphics card.

ATTENTION: If your system has been running for a period of time prior to opening the panels, it is very important that you wait until the graphics card in your system has cooled before taking the card out of the system. Graphics cards get very hot when they have been operating for any length of time.

- 4 Remove two adjacent slot covers if you do not have a graphics card installed.

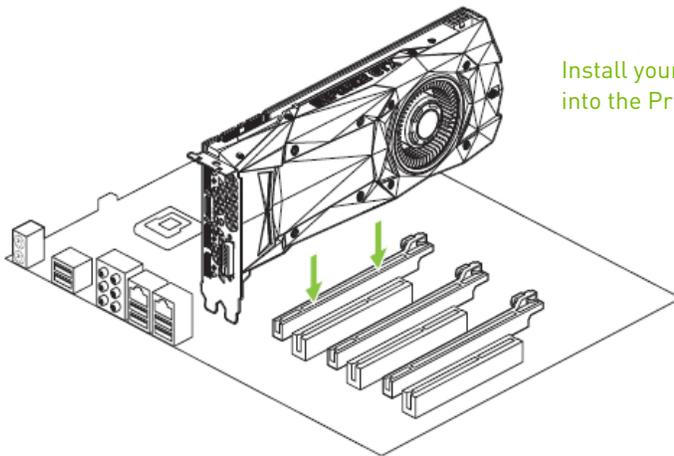

Remove two adjacent slot covers that corresponds to the PCI-Express slot you are installing the TITAN X graphics card in.

Note: The NVIDIA® TITAN X card is double-wide and will require removing two slot covers.

- 5 Plug the TITAN X graphics card into the Primary PCI Express x16 slot on your motherboard. This is often the slot closest to the CPU but may be the second or third slot. Look for the slot labeled x16. It will likely be the only PCI Express slot with a retention lever on the end of the slot or the one closest to the CPU

Install your first TITAN X graphics card into the Primary PCI Express x16 slot.

Note: It is recommended that you install the graphics card into the primary PCI Express x16 slot. If you install the graphics card into the secondary slot, your system may not recognize the graphics card and there will be nothing displayed on the monitor.

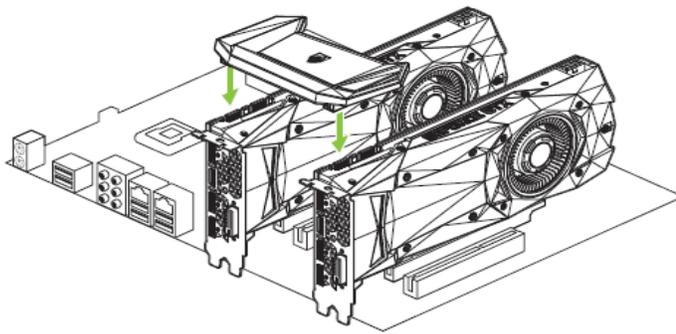

Also note that on some motherboard SBIOS, the physical location of the primary slot can be configured when there are more than one PCI Express x16 slots.

If you are installing an additional NVIDIA® TITAN X graphics cards for a 2-way NVIDIA SLI® configuration, continue with step 6. If you are only installing one GeForce card, go on to step 8.

Note: All of the graphics cards in an SLI configuration must be identical. Therefore, both cards in a 2-way SLI configuration must be TITAN X graphics cards.

- 6 Install a second TITAN X graphic card (2-way SLI):
Install the second GeForce card into the outer most PCI Express x16 slot on the motherboard.
Remove the associated slot covers for the second TITAN X graphic card as shown in step 4.
- 7 Connect the two TITAN X cards together using the dual SLI bridge connector that came with your SLI-ready motherboard.

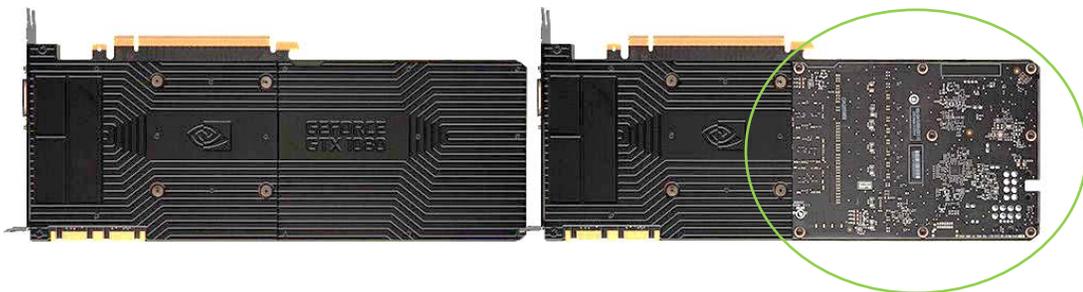

2-way SLI configuration: Install your second TITAN X graphics card into the outer PCI Express x16 slot (the outer slot is the one farthest away from the CPU).

Connect the two cards together using the dual SLI bridge connector that came with your SLI-ready motherboard.

Note: For 4K and surround gaming performance, use the NVIDIA SLI High Bandwidth Bridge available from <http://www.geforce.com/hardware/technology/sli> and select **NVIDIA SLI Bridge**. There are three sizes available depending on which slot you choose to put the second card.

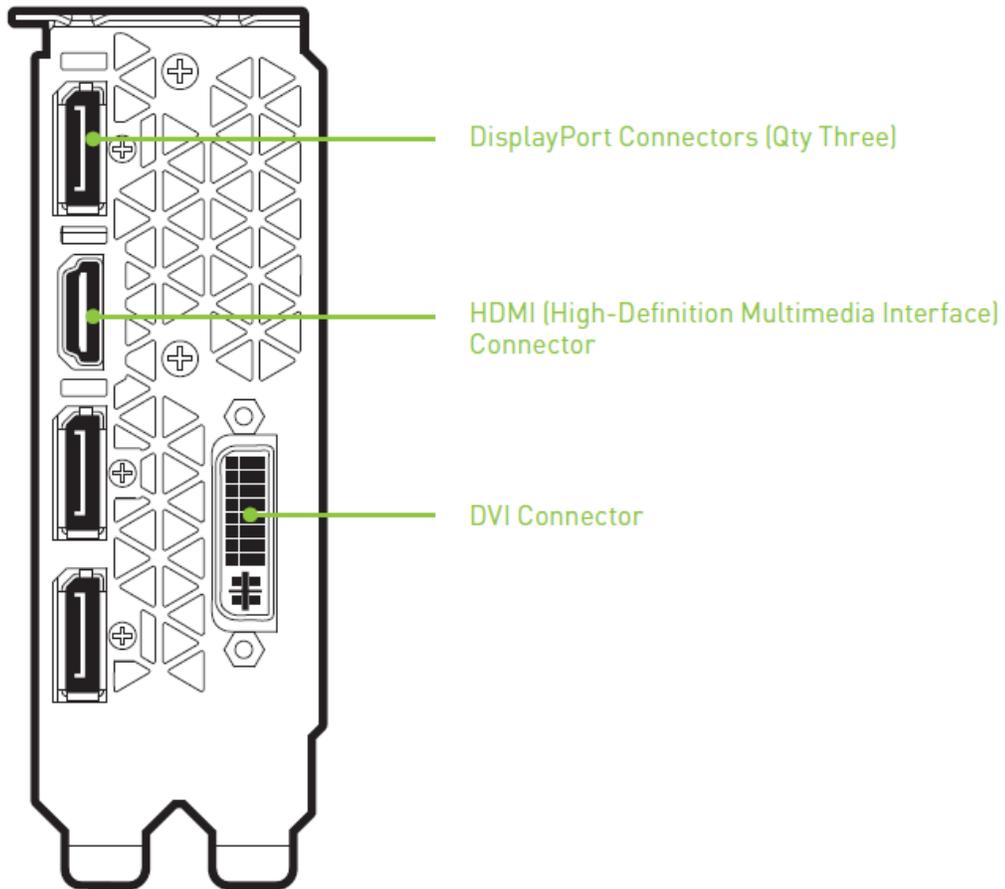

The TITAN X has a new industrial design with a faceted body and a new low profile backplate. The backplate features a removable section to allow better airflow between multiple graphics cards in an adjacent SLI configuration.

- 8 Connect the 8-pin power connector from the power supply to the power connector on the top edge of the NVIDIA® TITAN X graphics card. Note that the connector and socket on the graphics card have a unique shape and connect one way only.

- 9 Reinstall the cover on your computer and reconnect any cables that you removed earlier in the installation.

04

SOFTWARE INSTALLATION
