

NVIDIA Conflict Minerals Statement – October 2012

NVIDIA is fully committed to operating in a socially responsible manner and to implementing due diligence practices designed to determine whether minerals from the Democratic Republic of Congo and adjoining countries (DRC), including gold, tantalum, tungsten and tin, used in our products are “conflict-free”.

We are participating in the Electronic Industry Citizenship Coalition (EICC)-Global e-Sustainability Initiative (GeSI) Extractives work group to improve traceability of minerals and ensure responsible sourcing. We support, contribute to and will rely on industry initiatives, such as the EICC-GeSI Conflict-Free Smelter Program (CFS), to validate that the minerals used in our products are not contributing to conflict and come from socially responsible sources.

We are working closely with our suppliers to understand the sources of the minerals contained in our products. We have utilized the EICC-GeSI Conflict Minerals Reporting Template to request that our suppliers report the identity and location of smelters for inclusion in the EICC-GeSI CFS.

Due to the complexities of our supply chain, we are unable to verify that all of our products contain only conflict-free minerals at this time. We will continue our due diligence efforts and advise our customers and shareholders of the status of our progress.
