

## **ICERA SEMICONDUCTOR EXPANDS ICELINK™ EARLY ACCESS PROGRAM**

**Bristol, UK – 25th November 2003.** Icera Semiconductor, a UK-based, fabless semiconductor company, has today updated and expanded its ICELINK™ early access partnering program for wireless terminal developers.

The ICELINK™ early access program that was originally launched in March 2003 has already allowed a large number of leading wireless terminal developers to gain insight and details of the breakthrough technology that Icera Semiconductor is developing. With effect from today Icera is able to provide new information that demonstrates the performance gain and the significant power consumption advantage of this new technology. "Our technology delivers unprecedented flexibility combined with significant power savings over conventional solutions. This unique combination will allow leading wireless terminal OEM's and ODM's to rethink their future product roadmaps but full technical details are only being made available to selected customers through the ICELINK™ program," stated Nigel Toon, Icera's Vice President of Marketing.

Engagement in the program is covered by mutual non-disclosure agreement and is therefore confidential with no specific 'named' customer engagements expected in the near future.

Companies are able to register their interest in the ICELINK™ program at: [www.icersemi.com/register/](http://www.icersemi.com/register/)

### **About Icera Semiconductor**

Icera Semiconductor is an exciting new fabless semiconductor company that is pioneering a new era in low power devices. The company was founded in April 2002 by a highly experienced team of semiconductor executives and in Jan 2003 raised a \$10M Series A funding from the venture capital firms Benchmark Capital and Atlas Venture. The company is incorporated in the Delaware, USA and has design locations in the UK. More information is available at [www.icersemi.com](http://www.icersemi.com).
