

GEFORCE NOW™

QUICK START GUIDE

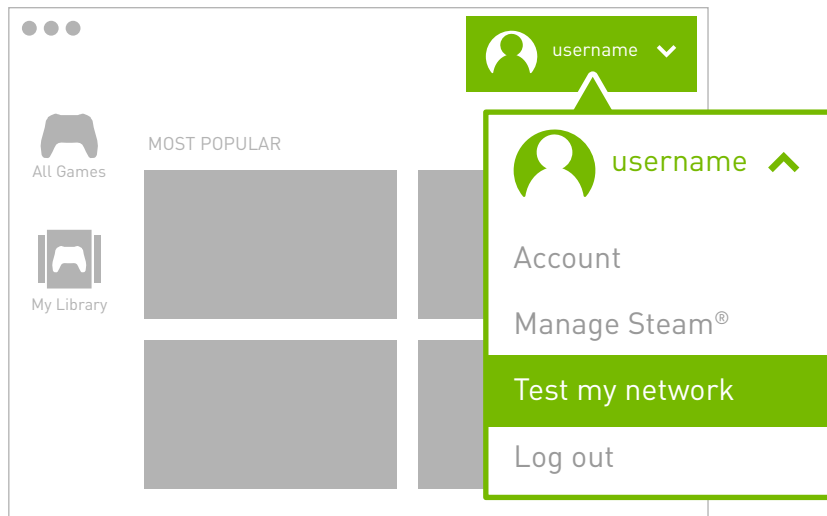

nVIDIA®

01

TEST YOUR NETWORK

Use the in-app network test to confirm that your network meets GeForce NOW for Mac's requirements for an optimal gaming experience.

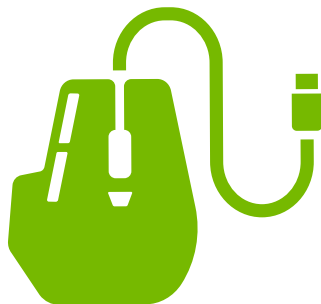

Click on "Test my network" under username.

02 SWITCH TO A GAMING MOUSE

A USB (wired or wireless) or Bluetooth gaming mouse—such as those from Razer or Logitech—will provide reduced latency, higher sensitivity and a tactile scroll wheel.

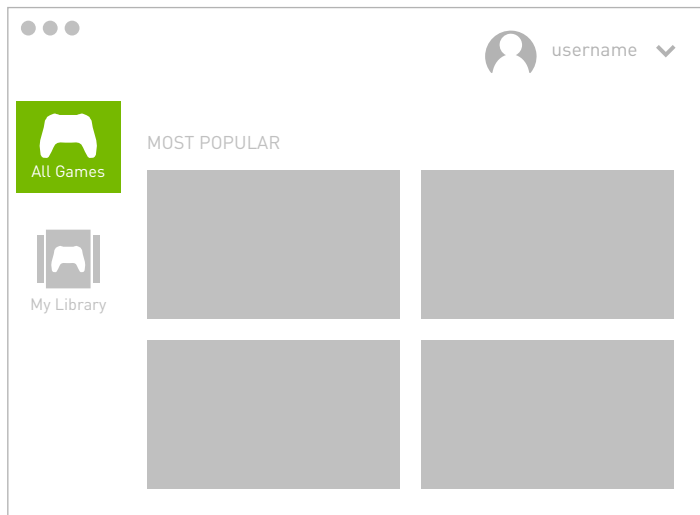

Read system requirements.

03 FIND SUPPORTED GAMES

In the app, browse the list of supported games under the **“All Games”** section.

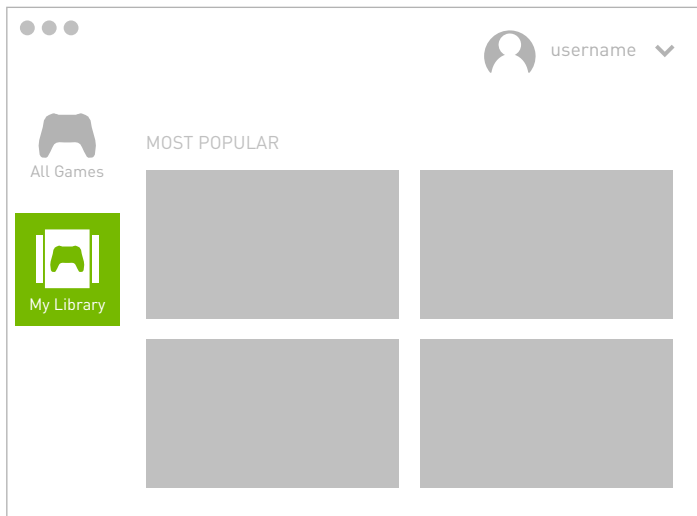

These games can be installed and played in less than a minute and support cloud saves.

04 INSTALL AND PLAY GAMES

Click a game and install it onto your virtual gaming PC. You'll need to log into the digital store associated with your account to confirm your ownership, or purchase the game.

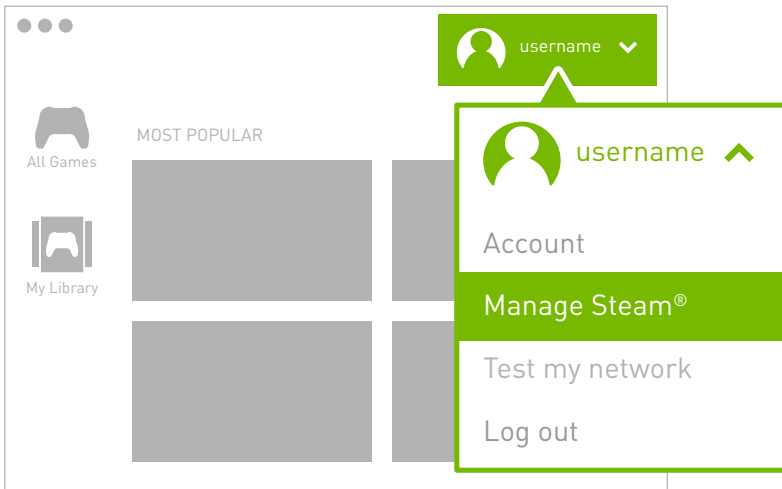

It will be saved in **"My Library"** to quickly play the next time you log in.

OTHER STEAM GAMES

You can also install unsupported titles by clicking on **“Manage Steam”** under your username.

They won't feature optimal settings, one-time install, or cloud saves (unless they support Steam Cloud Sync and you have enabled this). These games also need to be installed each time you log in to play, which can take up to 30 minutes.
