

Report of Independent Accountants

To the Board of Directors of NVIDIA Corporation:

We have reviewed management's assertion, included in the Emissions Assurance section of the 2011 NVIDIA Global Citizenship Report ("GCR"), that the total consolidated Scope 1 (direct) and Scope 2 (indirect) greenhouse gas ("GHG") emissions of NVIDIA Corporation's domestic and international facilities for the year ended December 31, 2011, disclosed within the GCR, are presented in conformity with the assessment criteria set forth in management's assertion (the "assessment criteria").

NVIDIA Corporation management is responsible for the assertion and for the assessment criteria which it has identified as an objective basis against which it assesses and reports on the selected sustainability metrics. This responsibility includes the design, implementation and maintenance of internal control relevant to the preparation of selected data that is free from material misstatement, whether due to fraud or error.

Our review was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants. A review is designed to provide limited assurance, and as such is less in scope than an examination, the objective of which is the expression of an opinion on management's assertion. Accordingly, we do not express such an opinion. The procedures we performed included inquiries of persons responsible for the selected sustainability metrics, understanding the processes for collecting and reporting the selected sustainability metrics, analytical procedures, and inspection of documents.

GHG quantification is subject to inherent uncertainty because of such things as emissions factors that are used in mathematical models to calculate emissions and the inability of those models, due to incomplete scientific knowledge and other factors, to precisely characterize under all circumstances the relationship between various inputs and the resultant emissions. Environmental and energy use data used in GHG emissions calculations are subject to inherent limitations, given the nature and the methods used for determining such data. The selection of different but acceptable measurement techniques may result in materially different measurements.

Based on our review, nothing came to our attention that caused us to believe that the selected greenhouse gas data referred to above are not fairly stated, in all material respects, based on the corresponding assessment criteria set forth in management's assertion.

A handwritten signature in blue ink that reads "Pricewaterhousecoopers LLP". The signature is written in a cursive, flowing style.
