Tesla S1070 Overview

The NVIDIA® Tesla™ S1070 Computing System is a 1U rack-mount system with four Tesla T10 computing processors. This system connects to one or two host systems via one or two PCI Express cables. A Host Interface Card (HIC) is used to connect each PCI Express cable to a host. The host interface cards are compatible with both PCI Express 1x and PCI Express 2x systems.

Key Specifications

Computing Processors
- Four Tesla T10 graphics processing units (GPUs)
- 16.0 GB of high speed memory, configured as 4.0 GB for each GPU

Mechanical Overview
- Physical Dimensions
  - System: 1.71 inches high × 17.425 inches wide × 28.5 inches deep
  - System weight without external accessories: 34 lbs
  - Shipping box: 9.5 inches high x 24 inches wide x 37.5 inches deep
  - System shipping weight with standard accessories: 61 lbs
- PCI Express Cable
  - Standard: 0.5 meters in length
  - Optional: 2.0 meters in length
- Host interface Cards
  - PCI Express low profile form factor
  - Standard card requires a ×16 PCI Express slot
  - An optional card is available for ×8 PCI Express slots
- Rack Compatibility
  - Fits 4-post, 19” EIA compatible racks
  - Rack depth between posts: 28.7 to 36.3 inches
- External Connectors
  - Two cable connectors for ×16 PCI Express
C19 format female connector for power cord

Operating Environment

- Temperature: 10 °C to 35 °C
- Relative humidity: 10 % to 80 % non-condensing
- Maximum Airflow: 143 cfm

System Architecture

The Tesla S1070 GPU computing system is based on the T10 GPU from NVIDIA. It can be connected to a single host system via two PCI Express connections to that host, or connected to two separate host systems via one PCI Express connection to each host.

![Figure 1. Tesla S1070 System Architecture](image)

Each NVIDIA switch and corresponding PCI Express cable connects to two of the four GPUs in the Tesla S1070. If only one PCI Express cable is connected to the Tesla S1070, only two of the GPUs will be used. To connect all four GPUs in a Tesla S1070 to a single host system, the host must have two available PCI Express slots and be configured with two cables as shown in Figure 2.
The Tesla S1070 can also be used with hosts that have only one available PCI Express slot. However, two host systems are required and should be connected as shown in Figure 3. Each host system will access two of the four GPUs.

![Diagram of Tesla S1070 Connection to Two Host Systems]

**Figure 2.** Tesla S1070 Connection to a Single Host System

**Figure 3.** Tesla S1070 Connection to Two Host Systems
Configuration

There are two configurations available (Table 1) for the Tesla S1070 computing system.

</tbody>
</table>
The Tesla S1070 (Figure 4) uses a 1U form factor chassis and conforms to the EIA 310E specification for 19-inch 4-post racks with 900 mm to 1000 mm depth. The chassis dimensions are 1.73 inches high × 17.5 inches wide × 28.5 inches deep.

Figure 4. System Chassis Drawing
Host Interface Card (HIC)

The HIC conforms to the PCI Express low profile form factor. This card is compatible with both PCI Express 1× and PCI Express 2.0 systems. A ×8 version is also available for systems that do not have ×16 PCI Express slots. The HICs ship with a full-height bracket installed and includes a low-profile bracket.

Figure 5 shows the ×16 version of the card with the full-height bracket.
PCI Express Cable

The Tesla S1070 uses 0.5-meter PCI Express cables as the standard connection to the host system(s). Figure 6 shows the dimensions of this cable and its connectors. A 2.0-meter version of the cable is also available as a standalone accessory and uses the same connectors as the 0.5-meter cable.

Note: For Figure 6 the dimensions are in millimeters unless otherwise labeled.

Figure 6. PCI Express Cable (0.5 Meter)

The minimum bend radius is 38.7 mm for the PCI Express cable. Figure 7 shows details of how this is measured relative to the I/O plate on the host interface card and relative to the cable/connector interface.
Rails for Rack Mounting

The Tesla S1070 uses a pair of rails for mounting to a 4-post, EIA rack. The rails can expand to fit a distance from 730 mm (28.74 inches) to 922 mm (36.3 inches) for the inside dimension between the front and rear posts. See Figure 8 for the exact dimension details.

**Note:** For Figure 8 the dimensions are in millimeters unless noted in square brackets [xx.yy +/- zz] that indicate dimensions in inches.
